## Safe storage of gate keys

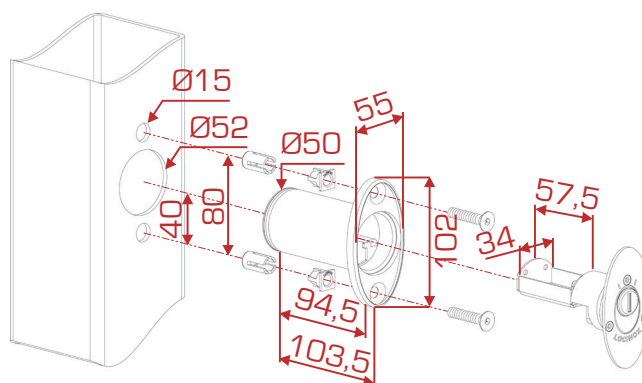

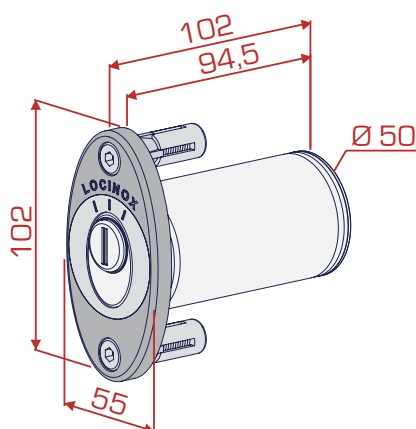

A key safe is a safe where the keys to gate are stored.

The key to this safe has to be saved close to the gate so that emergency services can easily find them and access the premises without forcing open the gate.

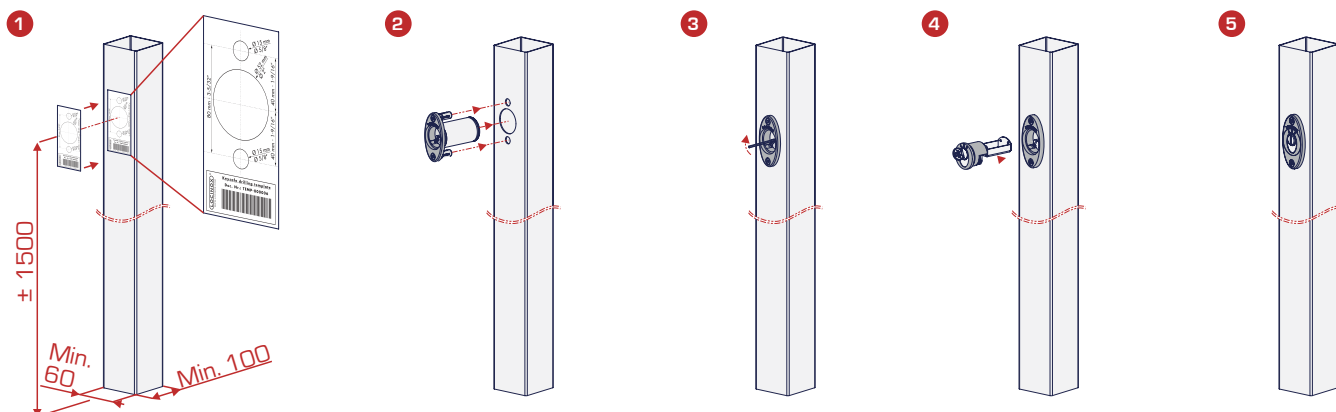

The key safe has a front cover and cylindrical housing made of stainless steel. The safe itself, gets made out of aluminium and gets locked with a cylinder lock. Thanks to the Quick-Fix system mounting the key safe is simple and easy.
